InterSession 6.2

3270 Session Manager for OS/390, VSE and VM

InterSession is a 3270 VTAM and TN3270 session manager for OS/390, VSE and VM. InterSession gives the users a single-point of access to all VTAM and TN3270 applications. InterSession establishes application sessions through an unlimited number of virtual terminals within one CPU or between multiple CPU's. InterSession supports all IBM mainframe operating systems (OS/390, VSE and VM), and all application host systems (i.e. CICS, TSO, IMS...).

Major Enhancements for Version 6.2

- **Windows Based Administration Tool** – Increase help desk productivity and lower training needs by using a well-known environment.
- **Built-in TN3270 Client** – Connect seamless to remote hosts via TN3270. The TN3270 client sessions is just another type of InterSession session, i.e. security, scripting, timeout settings, etc. works as for VTAM sessions.
- **TN3270E Printing** – Connect to VTAM printers directly from your desktop without SNA. With InterSession's virtual VTAM print TN3270E printers (a feature found in many TN3270 emulators) can be connected via TCPIP.
- **Network print support** – Direct passthru print, hardcopies and internally generated print to printers on your TCP/IP network. Supported protocols include LPD, RAW and PDL.

Highlights

- Single and Multiple Session Possibilities
- Built-in TN3270E server
- Automated Logon to Applications
- Individual Screen Layout
- Help System
- Easy Administration with on-line Maintenance Routines
- Flexible Security and Authorization System
- Pass Ticket Support
- Unique CICS Features Increases Security and Simplifies Maintenance
- Built-in Message/Mailbox System
- CUA-based Top Line Menu
- Screen Hardcopies to Any Printer
- Ability to Share Sessions with Other Users
- Automatic Data Compression
- Statistics and Accounting Information
- Online System Configuration
- Multilingual Possibilities for All Screen Text, support for non-latin SBCS (Russian, Arabic...)
- Supports All IBM Mainframe Operating Systems
- Supports All Application Host Systems
